Bird of the Month
MedPOINT uses X12
DataTug version 1.2
Cap Check 3.1
Upcoming Events

Dear Ron,

We are pleased to provide you our DataWing Software Newsletter, which highlights enhancements to our eligibility and capitation products. You will also see our upcoming events. If you would like more information or a personal demonstration of our products, please let us know.

Bird of the Month

DataWingSoftware.com Initiates
Bird of the Month

In recognition of our ornithological company name, and to have a little fun, we've added Bird of the Month to DataWingSoftware.com. At the bottom of our web page, you'll see a thumbnail photo of the reigning feathered friend. The thumbnails are linked to the informative and entertaining articles at the Cornell Lab of Ornithology.

The inaugural entry is the Arctic Tern featured on our web site.

MedPOINT Management implements Eligibility Manager X12 Extension Module

MedPOINT Management (Woodland Hills, CA) is the first [Eligibility Manager®](#) client to process ANSI X12 eligibility roster files (834) using the X12 Extension Module. Though this technology has been available for several years, payers have mostly continued to provide eligibility rosters in proprietary formats. MedPOINT needed to use the 834 file format from Care1st Health Plan because it provided new and legacy member id formats more cleanly than other available formats from Care1st. Implemented in December 2008, DataWing Software provided a seamless transition to the use of the 834 file format, while incorporating MedPOINT's preexisting business rules when necessary.

DataTug version 1.2 released

DataWing Software announces version 1.2 of [DataTug](#). This new version includes a redesigned user interface, and other changes that allow for more efficient site configuration. In addition, we have expanded the list of available health plans. DataTug now processes CSV files as well as Excel and XML files.

The new list of available health plans is: Alameda, Anthem Blue Cross, Blue Shield California, Care1st, Cigna, HealthNet, HealthNet MediCal, Inland Empire Health Plan, LA Care, Medi-Cal (California), Molina, Pacificare, and Scan Healthplan.

Cap Check version 3.1 released

Cap Check 3.1 is a significant release that greatly enhances the flexibility in configuring contract data for calculating expected payments. Previous versions included three generalized rate structures that covered most types of contracts. The new release allows for user-definable rate calculations. Users can create rate sets with any number of calculation steps. These steps can be drawn from a rich variety of calculation types. In addition, new calculation management tools simplify the testing and debugging of rate calculations.

[Cap Check 3.1](#) also includes integration with DataTug® for real-time eligibility verification, a new audit trail of manual data edits, and other useful features.

Upcoming Events

In our continued commitment to keep in touch with all of you, DataWing Software will attend the following conferences.

- [EZ-CAP Western Regional User Group](#)
March 26 & 27, 2009
Huntington Beach, CA.
- [Western Claims Conference](#)
June 14-16, 2009
Indian Wells, CA.

We hope to see you all there!
